

- *Real-Time accurate data*
- *Pre-Planning and ad-hoc personnel logistics*
- *Comprehensive view of competencies and certifications*
- *Increased safety awareness & compliance*
- *Effective managed emergency response*
- *Clear visibility of POB status & logistics schedules*
- *Easy to use graphical interface*
- *Comprehensive real-time management reporting*

### Personnel Logistics and Hotel Administration

The flight logistics and hotel administration module lies at the heart of the EPIC SMART-TRAC™ POB system and is capable of managing the administration, bed allocation, muster point, lifeboat allocation and certification of personnel.

With its ability to interface with common industry platforms, the SMART-TRAC personnel logistics module provides comprehensive, accurate, up to date personnel records including personal details, deployment history, next of kin, vaccinations, courses & certifications.

#### Key Features

- Comprehensive personnel records
- Pre-Transit bed & lifeboat allocation
- Multiple simultaneous personnel movements
- Dynamic pre, In-flight & arrival passenger reporting
- On-board lifeboat, muster & bed verification
- Personnel arrival and accommodation processing
- Flight/Shuttle reports and manifests
- Real-time POB status reporting by site & sub-location
- Optional SMART-WORK shift and workflow planning

The inbuilt flexibility of the SMART-TRAC system allows for the system to be used in a large variety of ways depending on the users operational requirements.

Independently as an offshore standalone solution, the system provides vessels & platforms the ability to manage the personnel arrivals, departures and inter-location movements, allocations and also general administration of the POB records.

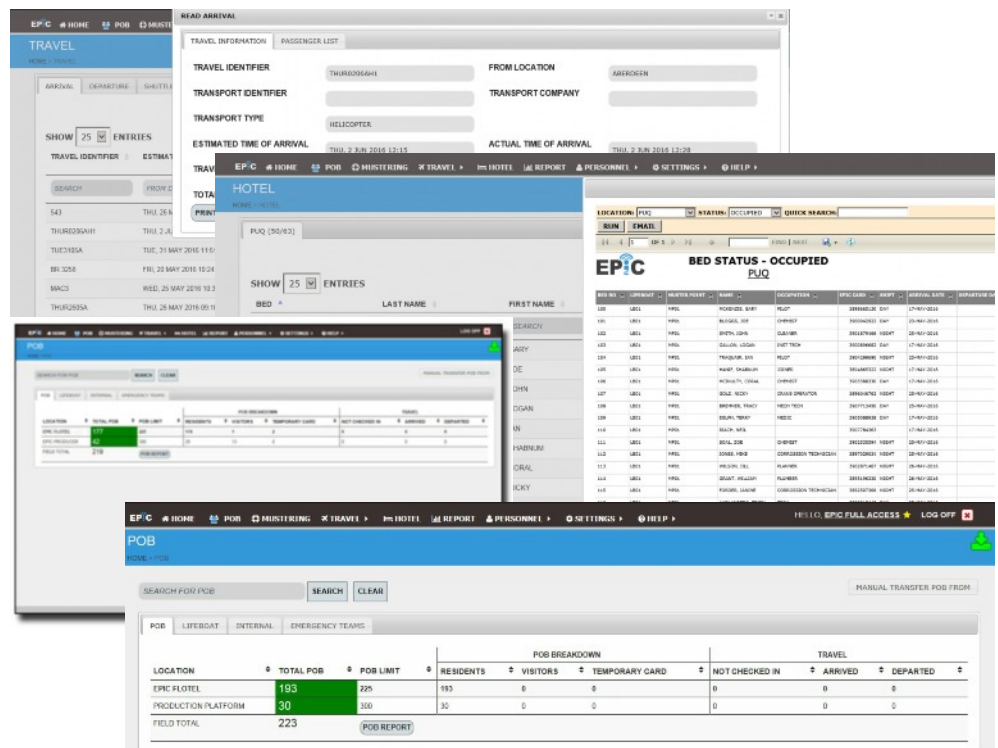

For small vessel fleets, pilot craft and walk2work accommodation requirements, a centralised onshore solution configuration can also be deployed, providing a cost effective centralised administration tool for POB management, transit and movement planning without the need for expensive onboard equipment but still providing the high levels of real-time visibility and emergency response management expected from a high quality safety solutions provider.

## Personnel Logistic's Module

This powerful management & reporting tool is modular based, providing dashboards and management screens that allows administration and vessel management teams to get to the data they need quickly and efficiently ensuring the smooth running of day-to-day offshore operations.

Fully customisable screens & dashboards that support customer definable logo's, widgets and icons, coupled with the ability to select various languages enhances its global reach and practicality making it a essential tool for onboard and walk to work applications.

For an on, or offshore “Heliadmin” administrator, SMART-TRAC’s software has been designed to provide users with quick access to accurate and up to the minute data sets shown in a simple intuitive GUI. This way, vital information is quickly available to allow successful management of key tasks such as the allocation of accommodation, muster stations and lifeboat allocation.

Day to day operation of personnel movement’s programmes including checking of daily flights arranging crew changes to flights and general OIM requests are also quickly accessed and completed using the SMART-TRAC solution.

During planned and unplanned safety alerts, the rapid allocation and management of evacuation procedures real-time, accurate information available from the SMART-TRAC POB system, and its specifically designed one click operations, become critical to the safe evacuation and emergency response process aiding the safe evacuation of all personnel quickly and efficiently.
